PROFESSIONAL SUMMARY

As a current student studying Full-Stack Development with a focus on front-end development, I have a strong understanding of web technologies such as HTML, CSS, and JavaScript. I have completed several projects that demonstrate my ability to create responsive designs, implement user interfaces, and build dynamic web applications using modern front-end frameworks such as React. I am also familiar with web standards and accessibility guidelines, ensuring that my projects are inclusive and optimized for all users. Additionally, I am a proactive learner, passionate about staying up-to-date with emerging technologies and trends in the industry. I am a dedicated team player, with excellent communication skills and the ability to work collaboratively to deliver high-quality products. I am excited to apply my skills and knowledge to contribute to a dynamic and innovative team as a front-end developer.

EDUCATION

Jomo Kenyatta University of Agriculture and Technology   June 2023
Business Information Technology   *Juja, Kiambu*

eMobilis Technology Training Institute
Full Stack Software and Android Development   *Kipro center, Westlands*

SKILLS

Technical Skills: Html, CSS, JavaScript, PHP, Django, Python, MySQL
Soft Skills: Teamwork, Effective communication, Collaboration, Time management, Ability to work with cross-functional teams, Problem-solving skills

PROJECTS

Restaurant website | HTML, CSS, Bootstrap, PHP((for contact form and table booking functionality)
- The website is for a restaurant that offers a variety of cuisine options for customers to enjoy. The homepage includes an introduction to the restaurant, photos of the interior and dishes, and a call-to-action to make a reservation. The menu page features the restaurant's menu with photos and descriptions of each dish. The about page provides more information about the restaurant's history and mission. Finally, the contact page includes a contact form built using PHP for customers to inquire about reservations or ask general questions. As a web developer, I designed and developed a responsive website for Tikkaway using HTML, CSS, Bootstrap, and PHP. The website showcases the restaurant's menu, location, and contact information, and provides users with the ability to make reservations through the integrated PHP contact form. The homepage features high-quality images of the restaurant's interior and dishes, and highlights the restaurant's unique atmosphere and cuisine. The menu page displays the menu with detailed descriptions of each dish and images, and the contact page provides a map of the restaurant's location and an integrated contact form for users to make reservations and ask questions.

Weather App with API Integration | HTML, CSS and JavaScript
- As a front-end developer, I created a weather app that displays real-time weather data for any location using an API from Tomorrow.io. I utilized HTML, CSS, and JavaScript to design and develop the user interface, and integrated the API to fetch and display the weather data. The app features a search bar that allows users to enter a location, and displays the current weather conditions, temperature, humidity, wind speed, and a forecast for the next few days. To improve the user experience, I implemented auto-complete for location search and provided options for units conversion.
